Profile

First-Class Software Engineering graduate and Full-Stack Systems Developer with a proven track record at NEXT. Leveraged a high-impact placement year into a full-time role, earning a rapid promotion to Mid-Level Developer in just 18 months. Specialises in modernising and engineering critical warehouse logistics systems using C#, .NET, Blazor, ASP.NET Core, and EF Core. Eager to bring proven problem-solving and system modernisation skills to a new challenge.

Technical Skills

Languages	C#, SQL, C++, HTML5, CSS3, JavaScript, TypeScript
Frameworks	.NET (Core), ASP.NET Core, Blazor, MudBlazor, Entity Framework (EF) Core, Angular
Methodologies	Agile, Scrum, Sprints, User Stories & Pointing
Core Competencies	Full-Stack Development, System Modernisation, Project Leadership, Team Collaboration, Problem-Solving, Stakeholder Presentation

Experience

Jul 2022 – Present **Software Developer**, *NEXT LTD*, Sheffield, South Elmsall (Hybrid)

- Developed and maintained critical full-stack warehouse logistics applications, contributing to the success of multi-million pound warehouse operations.
- **Key Projects:**
 - **Legacy System Modernisation:** Single-handedly owned the 6-month project to modernise a critical legacy reporting application now used by all warehouse operation teams (incl. Returns, Service-to-Service, Enquiries, Retail, Directory, and Rapids). Meticulously re-engineered over 93 reports and migrated merchandise intake systems into a new, integrated solution with a C# .NET backend. For the frontend, worked closely with a remote lead UI engineer, implementing MudBlazor components to ensure a universal brand look and feel consistent with all other NEXT applications (website, finance, and core business systems).
 - **IIP (International Intake Processing):** Developed and integrated a new C#.NET application for processing international intake within existing UAE/Dubai warehouses, enhancing global logistics capabilities.
 - **Checkstation Application:** Contributed to the design and implementation of the "Checkstation" State Machine (SM) client application, a vital system for reporting and routing non-compliant products in NEXT's flagship E3 warehouse.
 - **Generic & Inbound Applications:** Worked on core inbound applications, developing new features and maintaining systems crucial to initial product intake and processing.
- Actively participated in all phases of the Agile development lifecycle, including sprint planning, daily scrums, user story pointing, and sprint reviews.
- Regularly presented feature demonstrations and progress updates to the development team and stakeholders.
- Recognised for high-impact contributions and technical aptitude with a formal job offer to

return as a Junior Developer, culminating in a promotion to Mid-Level Full-Stack Systems Developer within 18 months.

May 2021 – Sep 2021 **ID Verification Administrator**, *Ant Marketing*, Sheffield

- Verified individual identities for the COVID-19 vaccine passport programme, meticulously analysing documentation to accept or reject submissions based on validity.
- Tasked with identifying and preventing fraud, identity theft, and collusion.
- Collaborated in "buddy groups" to provide second opinions on difficult cases, enhancing team accuracy and decision-making.

Jul 2019 – Sep 2020 **Admin & Product Lister**, *BNIKONN*, Sheffield

- Managed product listings across multiple e-commerce platforms including the official website, eBay, and Amazon.
- Gained key insights into online business operations, stock management, and digital merchandising.

Nov 2017 – Jun 2019 **Customer Advisor**, *Queensland Furniture*, Sheffield

- Advised customers on furniture selections to match their needs, successfully driving sales and managing in-store stock.
- Developed strong customer service, consumer communication, and sales skills.

Education

2020–2024 **BEng (Hons) Software Engineering - FIRST CLASS**, *Sheffield Hallam University*, Sheffield

Key Modules:

- Final Year Dissertation: (First Class) Designed and built a full-stack responsive web app using Blazor Web Assembly, C#, .NET, and SQL Server with migrations.
- Software Architecture & Design
- Management of IT Projects
- Robotics (C++ algorithm development for ZUMO34U robot)
- Networked Software Development (Java)
- Software Projects (Client-based project using C#, .NET, HTML, CSS, SQL)
- Database & Systems Modelling (SQL, C#, UML)

2018–2020 **A-Levels**, *High Storrs Sixth Form*, Sheffield

- Psychology: B
- Economics & Business: B
- English Language: C

2013–2018 **GCSEs**, *High Storrs Secondary School*, Sheffield

9 GCSEs at grades A-C (9-4), including Business Studies (A), Maths (5), and English (6).
